Revised Cost Analysis for High Power
Stereo Comparator Head

Dear Bill:

As promised in our recent discussions of October 5, please find enclosed our revised Cost Analysis for the High Power Stereo Comparator Heads. This Cost Analysis supercedes that submitted with my letter of September 18, 1964. Also included are copies of our Certificate of Current Pricing.

25X1A

The matter concerning the replacement of the tiltable eyepieces with fixed eyepieces has been investigated. Should this change be desired, a net cost of [] may be deducted from the unit prices given on the attached sheet.

Your request for a breakout of the cost of the internal placement of the reticle and the redesign of the base plate has also been considered. These costs, however, cannot be segregated. It is our understanding that the primary purpose of this project is to provide a measuring capability within the High Power Stereoviewer optical system. Placement of a reticle within the optical system will necessitate a change of prisms and the redesign of a relay lens. To properly mount this system, it is necessary to redesign the base plate casting, which will serve as mounting media for the reticles.

25X1A

In effect, the total cost of the instrument, less the cost of tiltable eyepieces, represents the cost of incorporating a reticle within the optical system. The cost of the redesigned base plate, which is included in our current Cost Proposal, is approximately [] per instrument. Please note, however, that this or a similar base plate/reticle mount is necessary to the design of this instrument.

Supplemental Agreement No. 1, which increases the quantity of Item No. 1 by four (4) units, has been received. Your prompt consideration of the above proposal is requested. If we are to proceed with the

design of three (3) High Power Comparator Heads, the three (3) units which are currently required under Item No. 2 may be applied to satisfy some of the component requirements for the additional four (4) units of Item #1.

If you have any further questions concerning this proposal, please contact the writer directly.

Very truly yours,

Attention: [Redacted]

Gentlemen:

Enclosed please find our proposal for the design and fabrication of the three (3) High Power Stereo Comparator Heads. Included with our technical proposal are copies of an outline drawing of the proposed instrument.

A cost analysis is enclosed on Attachment A.

Delivery of the first unit is estimated to begin 4½ months from the date of contract and follow at the rate of one instrument every two weeks thereafter.

If you have any questions concerning our proposal, please contact the writer directly.

Very truly yours,

25X1A
